

JRF ORTHO FOCUSES ON PROVIDING ORTHOPEDIC SURGEONS WITH SPECIALIZED ALLOGRAFTS FOR JOINT REPAIR.

HISTORY:

JRF Ortho has a storied history for over a decade creating progressive solutions and being recognized for unequalled standard of customer care. As the largest provider of orthopedic specialized allografts and furnishing surgeons with exceptional products, *JRF Ortho is the quality standard that you can depend on.*

Although known by other names in the past – Joint Restoration Foundation, JRF, AlloSource – we are now simply “JRF Ortho”.

RELATIONSHIP:

JRF Ortho supplies the highest viable and most widely available cartilage in the industry. The grafts are processed by AlloSource® and Community Tissue Services®. Local support and instrumentation are offered by Arthrex®.

WHY JRF ORTHO:

As the industry leader, JRF Ortho focuses on exceptional product quality, innovative solutions, and superior customer care. Our goal is to develop novel techniques for allograft joint repair to orthopedic surgeons who specialize in helping patients regain movement and live a more normal life; thus, JRF Ortho is redefining the standard for allograft joint repair and maximizing the gift of donation.

PRODUCTS:

Delivering the highest viability fresh osteochondral allografts (OCA) and offering a selection of presutured tendons, JRF Ortho offers surgeons world-class products to improve their patients’ standard of life.

We have an ample supply of allografts, which are always delivered in a timely manner. Our expertise and customer care are unmatched to help you find optimal allografts and efficiencies for surgical procedures. Through our unique product offering, innovative solutions, and our proven expertise as a tissue supplier, we will continue to preserve and restore your patients’ quality of life.

Product Advantages:

- ▶ Shorter wait times
- ▶ Higher viability
- ▶ Efficiency in the OR
- ▶ Ultra low dose sterilized tendons
- ▶ Optimal solutions for small, focal OCA defects

Our mission is to improve quality of life through innovative solutions for allograft joint repair.

PRODUCTS OVERVIEW

Osteochondral Allografts

Osteochondral allografts allow surgeons to transplant mature, hyaline cartilage with viable chondrocytes and subchondral bone in a single procedure. These grafts often are used to treat focal cartilage defects and they offer long-term repair for a patient's damaged hyaline cartilage.

Additionally, preshaped or ready to use fresh OCA Cores are the optimal solution for small, focal osteochondral defects. The Cores contain a mature, viable hyaline cartilage matrix with bone for a superior biomechanical and durable repair for complete replacement without donor site morbidity.

Presutured Tendons

Presutured tendons are sterile and preassembled with Arthrex FiberWire® or FiberLoop® for speed and convenience. Each tendon is assembled according to Arthrex specifications, by trained technicians, ensuring that the presutured tendon meets the requirements of the procedure to allow for anatomic, minimally invasive, and reproducible knee reconstruction.

Nonsutured Tendons

Nonsutured Tendons are an excellent repair option for any ligament procedure where multiple reconstructions have failed, where there is a loss of, or damage to a large segment of tendon or ligament. Valuable OR time is minimized therefore potentially reducing costs and offering optimal solutions to patients.

Meniscus

Meniscal transplantation is an innovative surgical technique designed to improve the biomechanics of a meniscus deficient knee. Meniscal allograft transplantation provides improvement in regard to pain and level of function for daily activities.

Our vision is to remain the leader in allograft joint repair through innovative solutions and superior customer service.
