Presutured tendons are sterile and preassembled with Arthrex® sutures for speed and convenience. Each tendon is assembled according to Arthrex specifications, by trained technicians, ensuring that the presutured tendon meets the requirements of the procedure to allow for anatomic, minimally invasive, and reproducible knee reconstruction.

**JRF ORTHO EXCLUSIVELY OFFERS A NUMBER OF PRESUTURED TENDONS.**

**ADVANTAGES OF NEXT GENERATION PRESUTURED TENDONS.**

- Consistent quality graft → Precision suturing method performed after patented cleansing method = consistent and accurate sizing while maintaining suture integrity with no variability
- OR time and cost savings → No autograft recovery → No construct assembly

SAFETY, TISSUE INTEGRITY & STERILIZATION

ADVANCED CLEANSING TECHNOLOGIES
CLEANSE WHILE PRESERVING TISSUE INTEGRITY

Tissue integrity is maintained with consistent processing, monitored temperature and limited reagent exposure.

Our processors’ use a proprietary bioburden reduction step that removes blood and lipids.

TERMINAL STERILIZATION WITHOUT COMPROMISING TISSUE PERFORMANCE

Recent studies show ultra-low dose, low-temperature irradiation does not impact the integrity of tissue and post-transplant failure rates.\(^1\),\(^2\)

JRF Ortho distributes ultra-low dose (9.5–15 kGy), low-temperature irradiated tendons that are used to obtain a Sterility Assurance Level (SAL) of 10\(^{-6}\).

Our processors are pioneers in ultra-low dose radiation sterilization for allograft tissue.\(^3\)

MAXIMIZING SAFETY WHILE PROVIDING QUALITY TENDONS

Working in a controlled environment with patented processes and ultra-low dose, low-temperature sterilization, our processors' skilled technicians deliver safe, high quality tendons.

Utilizing highly sensitive NAT testing, has resulted in no confirmed incidence of disease transmission.
